Art Unit: 2153

1. Claims 1-10 are presented for examination.
2. The title of the invention is neither descriptive nor precise. A new title is required which should include, using twenty words or fewer, claimed features that differentiate the invention from the Prior Art. The title should reflect the gist of or the improvement of the present invention.
3. The disclosure is objected to because of the following informalities:
(a) In claim 1, line 3, "an conference" is apparently typographical error.
Appropriate correction is required.
4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined

Art Unit: 2153

under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsui et al. [6,742,116].

6. Matsui et al. disclosed (e.g., see Figs. 1-15) the invention substantially as claimed. Taking claim 1 as an exemplary claim, the reference anticipates a method for constructing and operating a cyber-conference (an electronic conference room, chat rooms, col. 7, lines 19-54) in a system which interconnects a user client (user's terminals A, B, C of Fig. 1, a conference client (chat client 12 of Fig. 1, a cyber-conference operating server (chat server 100 of Fig. 1, col. 7, line 29), a program storage unit and a database through a communication network (Fig. 1), comprising the steps of:

a) accessing a cyber-conference operating website (chat room) provided by the cyber conference operation server (chat server 100 of Fig. 1, col. 7, line 29) (e.g., see col. 1 (line 65) to col. 2 (line 6), col. 7 (lines 19-54);

b) applying for registration to the cyber-conference operation server (e.g., see col. 2, lines 1-4);

c) approving the registration based on data stored on the database (e.g., see col. 3, lines 19-31) in response to the application for registration from the conference client; and

Art Unit: 2153

d) creating a cyber conference through the communication network by using a cyber-conference creation program stored on the program storage unit (e.g., see col. 3, lines 47-52).

7. As to claim 2, Matsui et al. further anticipates the steps of: e) holding a meeting of the created cyber-conference (chat, col. 7, lines 19-54); and f) processing data related to the meeting (e.g., see col. 7, lines 19-54).

8. As to claim 3, Matsui et al. further anticipates the steps of: c1) assigning a specific access code (e.g., see col. 2 (lines 1-21), col. 7 (lines 19-54)) to the conference client by using a predetermined algorithm; and c2) logging in (e.g., see col. 2 (lines 47-48), col. 8 (lines 6-16)) the cyber-conference operating website (conference rooms, chat rooms, col. 7, lines 19-54) with the specific access code assigned by the cyber-conference operation server (chat server 100).

9. As to claim 4, Matsui et al. further anticipates the steps of: d1) creating for the cyber-conference based on a cyber-conference building program (command button on the screen or icon, col. 5 (lines 1-21)); and d) providing content for the cyber-conference (e.g., see col. 4, lines 2-10).

10. As to claim 5, Matsui et al. further anticipates the steps of: e1) setting opening/closing date of the meeting (e.g., see col. 4, lines 54-56); and e2)

Art Unit: 2153

providing technical section (changing password for participation ..., a change in the user ..., a request to generate a common key, etc.) of the cyber-conference (e.g., see col. 4, lines 57-60).

11. As to claim 6, Matsui et al. further anticipates the steps of: e3) receiving an application of participation to the meeting from the user client (e.g., see col. 4 (lines 54-62), col. 7 (lines 19-45)); e4) assigning a temporary access code to the user client (unique e-mail address of the user, col. 7, lines 51-54) to the user client completing the application under the control of the cyber-conference operation server; and e5) receiving data to be presented in the meeting (e.g., see col. 4 (lines 60-61), col. 7 (lines 19-24)) from the user client completing application.

12. As to claim 7, Matsui et al. further anticipates the steps of: e51) classifying (configuring) the received data depending on the technical section (changing password for participation ..., a change in the user ..., a request to generate a common key, etc., col. 4, lines 57-60) to store the same on predetermined location (icon of a key, command button on the screen, col. 5, lines 18-19).

13. Claims 8-10 are similar in scope as of claims 1-7, and therefore claims 8-10 are rejected for the same reasons set forth above for claims 1-7
